

Skin Care From Nature, Proven by Science

The NJ Center for Biomaterial's Center for Dermal Research will present "Natural Products and the Skin" at its 6th Annual Skin Workshop on April 23, 2014 at the Life Sciences Building, 145 Bevier Road on the Busch Campus of Rutgers University, New Brunswick, NJ.

Piscataway, NJ (PR Web) April 1, 2014 – The Center for Dermal Research at Rutgers University.

You have heard about herbal medicine. And you are probably using a natural skin care product. But do you know how these two are connected? And maybe you always wondered if that natural skin care product you are using is really "working" to affect your skin's health and wellness? You can find answers to these questions and many more, and learn about the use of naturals in skin health and beauty in the CDR 6th annual workshop "Natural Products and the Skin" on April 23rd, 2014. The plenary speaker, Dr. Miri Seiberg, will provide an overview on the use of botanicals in skin health, wellness and beauty, from ancient times to today's modern medicine. Miri will focus on today's natural skin care products, which combine historical human use knowledge with scientific understanding and clinical testing. Today's "cosmeceuticals" provide mechanistic understanding at the molecular, cellular and tissue levels, as well as safety assessments and clinical evaluations. Skin care companies are continuously developing new, safe and innovative products that are able to truly transform the health and appearance of skin. Examples of such innovations will be discussed in details throughout the workshop.

The 6th Annual CDR Skin Workshop's focus on the developments in the natural skin care arena provides sponsors and exhibitors with a unique opportunity to reach key researchers in need of their services. The schedule will accommodate a special session for commercial exhibitors.

The Center for Dermal Research (CDR) is part of the New Jersey Center for Biomaterials (NJCBM) at Rutgers University. Established in 2010, by Dr. Bozena Michniak-Kohn, the CDR is dedicated to linking industry, academia and government through research, collaboration and training in the pursuit of new innovations in dermatologic science and applications. Members of the CDR support the Center's activities and include many companies and individuals from pharmacopeia, cosmetics, skin tissue engineering and other skin-related interests.
